

KRISTINA

A Knowledge-Based Information Agent
with Social Competence and Human
Interaction Capabilities

LATEST NEWS ABOUT THE PROJECT

Information Day

Our partner semFYC welcomed the national health professionals and together they discussed about the social impact of KRISTINA on the European Health System and on the European society. We are glad to strengthen the discussion around migration flows and main consequences on the national Health System and we are going to promote the project among all the potential stakeholders and users all around Europe. Our Information Days are the occasion to meet our researchers and experts.

Use cases: How can KRISTINA help me
if I work for an institution?

KRISTINA facilitates migrated patient orientation within the host health system and the virtual agent can contribute to lowering the number of visits of migrated patients and to the reduction of inequalities.

Blog: KRISTINA met ARIA-VALUSPA

Last month, a workshop between the members of KRISTINA and ARIA-VALUSPA, another H2020 project on interactive virtual agents, was held in Dagstuhl (a computer science centre in the south-west of Germany). This seminar has been the occasion for all partners participating to the working sessions, to share ideas and innovative solutions during the discussion.

Events: Ongoing evaluation

Expert user partners EKUT, DRK and semFYC welcome new participants! Users can test the current prototype and its main functionalities. We are really glad to gather impressions and feedback. Our experts and researchers are constantly working and the next prototype will be based on these suggestions.

Related projects

KRISTINA is collaborating with other consortia in order to exchange outcomes and knowledge.

This month we want to present the project called **EMPAT** (Empathische Trainingsbegleiter für den Bewerbungsprozess).

Press Releases

One of the biggest challenge of our project is the integration of different components and new technologies related to speech recognition, information retrieval, semantic representation, emotional cue detection, dialogue management, avatar design. This section aims to provide some interesting news and articles related to our research.
